Project Overview

Sales Reporting Automation using Google Apps Script

Developed an **automated reporting** solution using **Google Apps Script** to **consolidate daily sales** transactions from **multiple branch spreadsheets** into **centralized reports**. The automation supports daily operational monitoring, marketplace reporting, and salesperson incentive calculations.

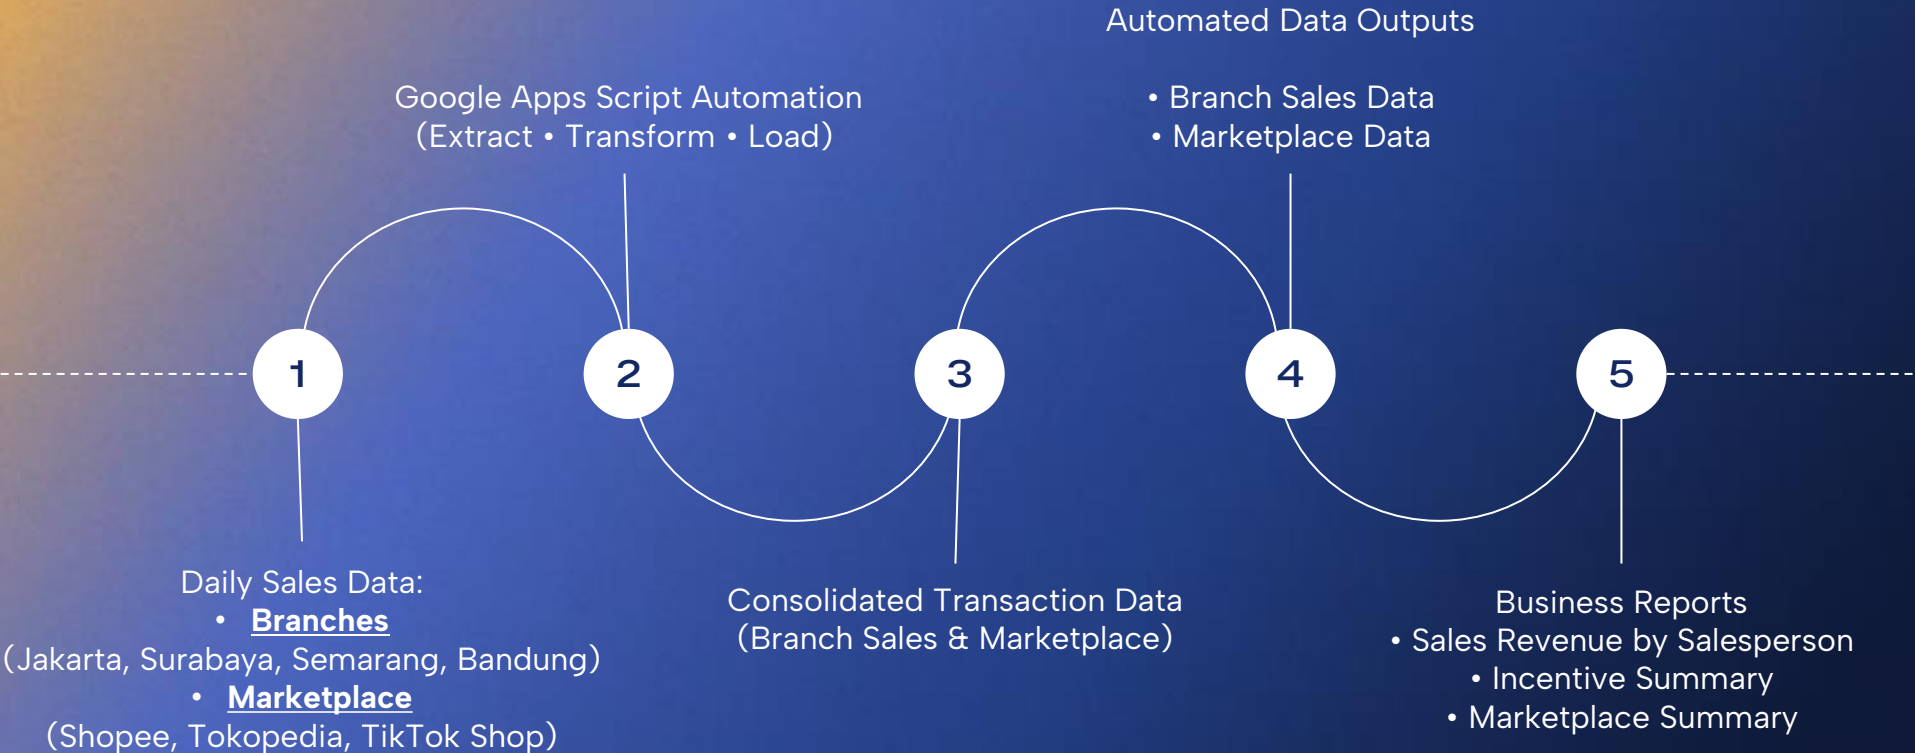

Business Problem

Stakeholders required **accurate daily sales reports** to monitor branch performance and calculate salesperson incentives. However, transaction data was stored separately across multiple branch spreadsheets, making the reporting process manual and inefficient.

Why Automation is Needed?

- Sales transaction data was **scattered** across multiple branch Google Sheets
 - Daily reporting required **repetitive manual data** consolidation.
- Marketplace transactions **needed to be separated** from regular sales transactions.
 - Salesperson incentive calculations **relied on accurate daily transaction data**.
- Manual processes **increased the risk** of human error and inconsistent reporting.
 - Report preparation **consumed valuable operational time**.

Automated Reporting Workflow

Automation Process

- **Connected** multiple Google Sheets from different branches using Google Apps Script.
- **Extracted** daily sales transaction data from each branch.
- Applied business rules to **filter transactions** by payment method.
- **Identified and separated** marketplace transactions (Shopee, Tokopedia, TikTok Shop).
- Consolidated transaction data into **centralized reporting sheets**.
- Automatically **sorted and formatted** the output reports.
- Enabled **one-click report refresh** through a single automation function.

- **Extract** → Retrieve data from multiple branch spreadsheets.
- **Transform** → Filter, classify, sort, and standardize transaction data.
- **Load** → Generate centralized reports automatically.
